What is WordPress?

Wordpress

Wordpress is a *FREE* publishing framework built on PHP and MySQL for creating and managing web content.

<http://wordpress.org/>

Why Wordpress?

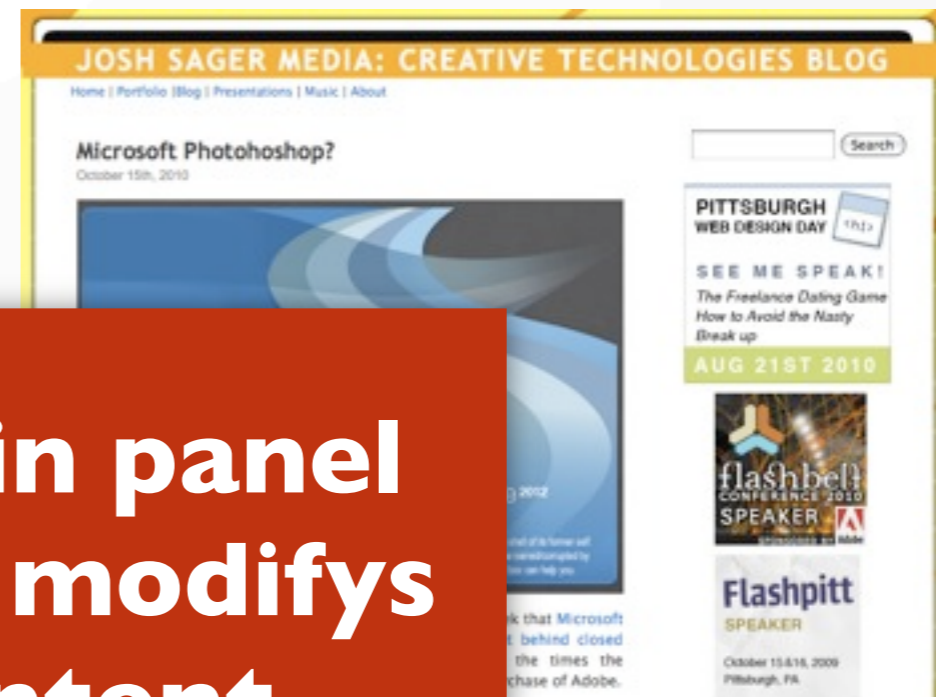

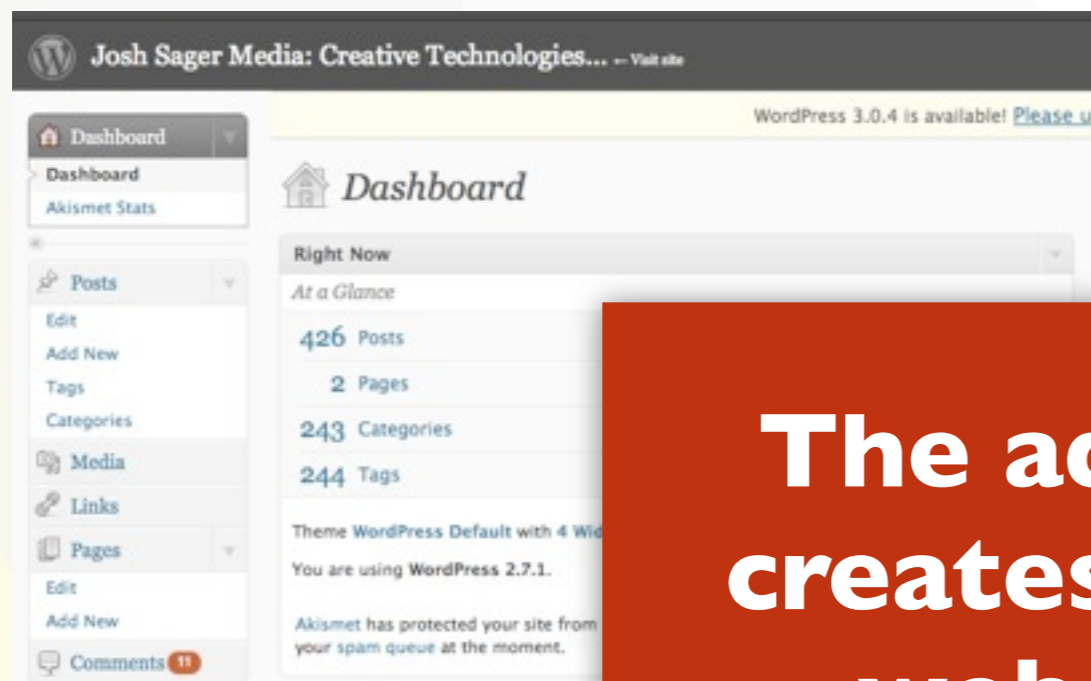

It's a fast and flexible framework that allows easy maintenance to content.

After it's set up the site can be managed from the admin panel.

But What does it do?

Admin Panel

Website

**The admin panel
creates & modifies
web content.**

Comparison

Wordpress

Every page can be managed from one document

Traditional

Every page is a new document

Wordpress Usage

- { Web host on their servers
- { Framework on your servers
